

# Introducing the only real-time RMS data replication solution

*Using CDC and Data Replication*

October 19, 2010

John Apps, OpenVMS Ambassador, HP

Hein van den Heuvel, HvdH Performance Consulting

Brian Schenkenberger, TMESIS

Richard Thomas, Director of Technical Services, Attunity

# Agenda

## ❖ Connect

- ❖ Offloading Data for BI – Enabling Technologies
- ❖ RMS CDC – Attunity Stream for RMS
- ❖ RMS Data Replication – Attunity RMS-CDC for SSIS
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# Attunity - CONNECT

- ❖ ODBC, JDBC, OLEdb... data access
- ❖ DB2, Oracle, Enscribe, ... RMS
- ❖ Heterogeneous queries / optimizer
  - ❖ Bindings ( Tuning, Log level, Optimizer settings, Codepages )
  - ❖ Deamons
  - ❖ Workspaces ( Server Processes, OpenVMS Usernames )
    - ❖ Prestarted, re-usable, log files, tcpi
  - ❖ Datasources ( Dictionaries / Directories
    - ❖ Tables
    - ❖ Adapters

# Metadata Import

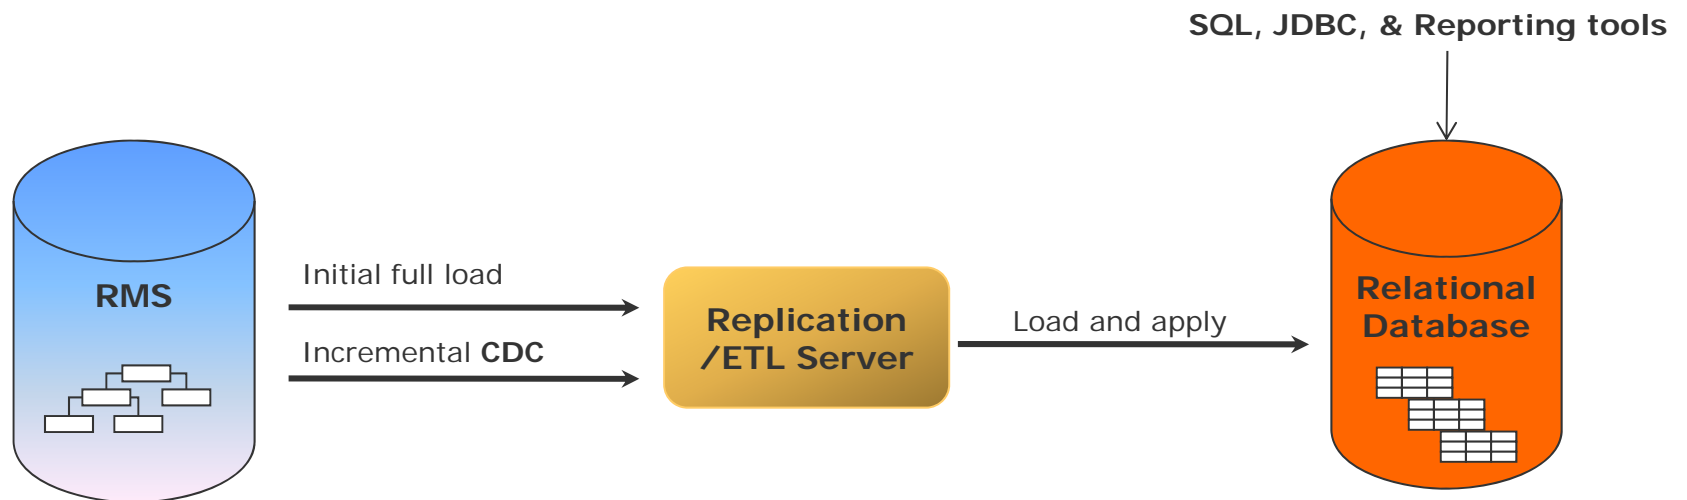

- ❖ Automatically define relational schema based on existing metadata
- ❖ Automated imports available from:
  - ❖ COBOL (COPY books)
  - ❖ BASIC (MAP files)
  - ❖ FORTRAN
  - ❖ Oracle CDD
  - ❖ DIBOL
  - ❖ DATATRIEVE
  - ❖ ...

# Agenda

- ❖ Connect
- ❖ **Offloading Data for BI – Enabling Technologies**
- ❖ RMS CDC – Attunity Stream for RMS
- ❖ RMS Data Replication – Attunity RMS-CDC for SSIS
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# Offloading RMS Data for BI

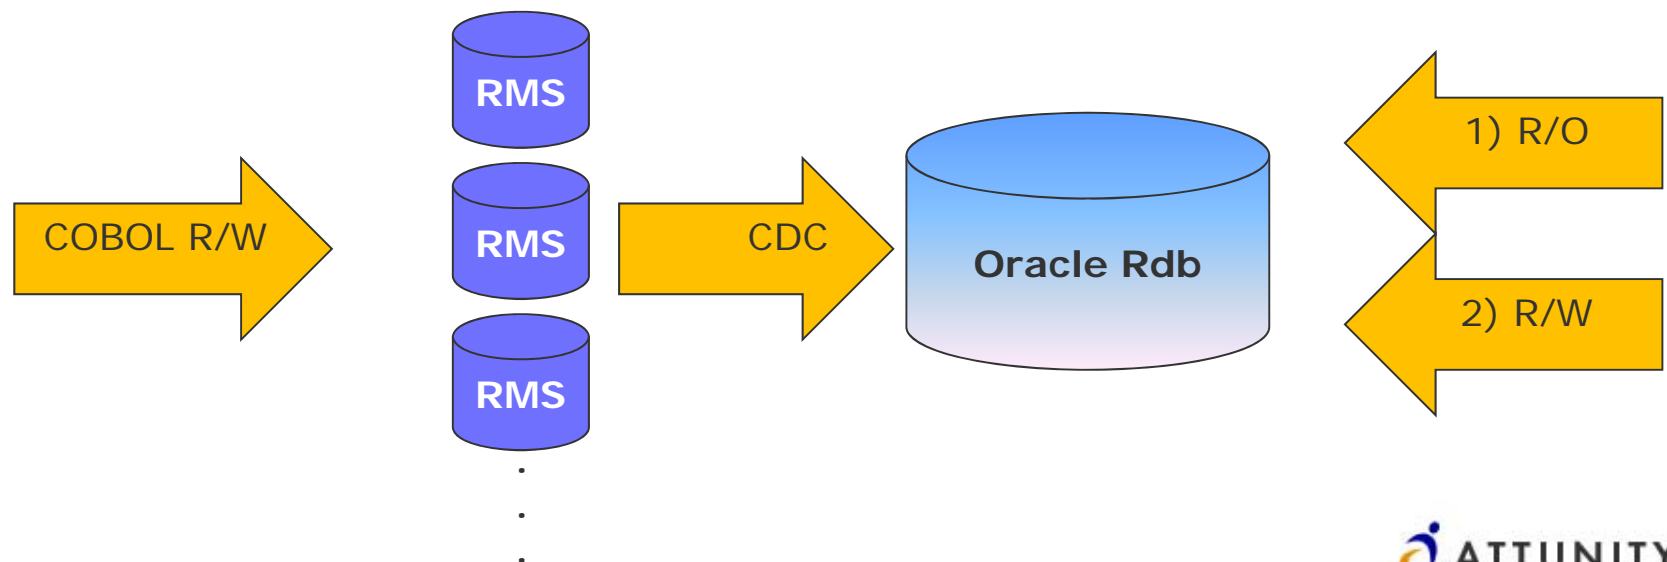

- ❖ Copy RMS data into a relational database
- ❖ As frequently as needed
- ❖ With little impact on the OpenVMS system

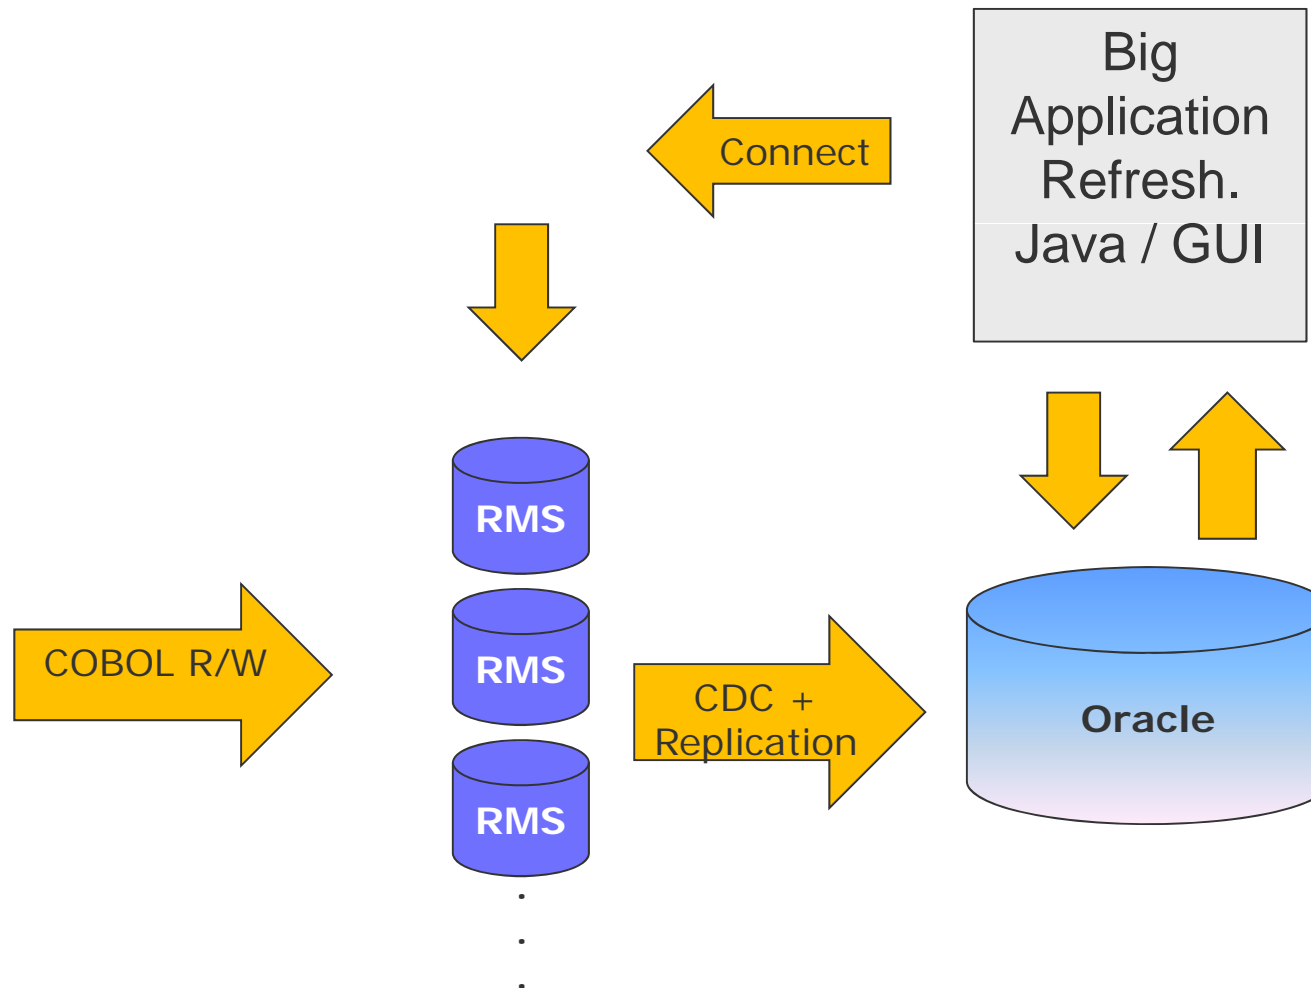

# Customer Example: Southeastern Freight Lines

Privately-held trucking company, specializing in next day and second day service. The company's dedication to process improvement is represented by over 285 quality awards.

# Customer Example: Express-Scripts – large pharmacy

# Enabling Technologies

## CDC

Change Data Capture (CDC) is a data integration technology that **captures and delivers only the changes made to enterprise data sources**. It enables real-time and efficient data integration/replication.

## Replication

Data Replication **creates a copy of one data source in another, periodically or in real-time**. Replication employs CDC to replicate changes from source to target efficiently and in real-time.

# Drivers for CDC and Replication

1. Demand for real-time data
2. Increasing data volumes
3. Shrinking batch windows
4. Pressure to reduce cost
5. Reduce risks of failing long batch jobs

# Use Cases for CDC and Replication

## **1. Offload Production Data for BI**

- ❖ Create a copy for reporting
- ❖ Stage data for data warehousing

## **2. Maintain Consistency across Operational DBs**

- ❖ Keep data integrity
- ❖ For application integration and MDM (master data management)

## **3. Data Migration/Upgrade**

- ❖ Sync with production following initial set-up
- ❖ Enable fail-back

# Challenges for CDC and Replication

## 1. Low Impact on existing applications

- ❖ Achieving minimal/no changes to existing applications
- ❖ Achieving low overhead on resources

## 2. Data mapping challenges

- ❖ Defining a relational schema for the RMS structures
- ❖ Applying RMS changes appropriately to the relational tables
- ❖ Arrays (of records) in records; Variant records.
- ❖ Funky data types (notably Dates!)

## 3. Complexity/Cost

- ❖ Making it simple, automated
- ❖ Low cost of ownership

# Agenda

- ❖ Connect
- ❖ Offloading Data for BI – Enabling Technologies
- ❖ **RMS CDC – Attunity Stream for RMS**
- ❖ RMS Data Replication – Attunity RMS-CDC for SSIS
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# CDC Approaches and Technologies

## Traditional approaches – Intrusive/High Impact:

- ❖ Use **timestamps** in extracts and file dumps
- ❖ Extract and **compare** current data to its history
  - ❖ Connx uses Checksums on RMS Indexed files buckets to detect changes.
- ❖ Use custom-built **triggers**

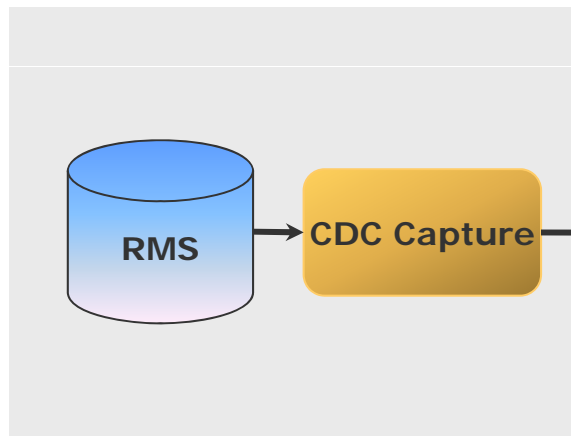

## Attunity approach – Non Intrusive:

- ❖ **Log-based** CDC
  - ❖ Low impact. Non-intrusive.
  - ❖ Efficient.
  - ❖ Reliable.
  - ❖ Scalable.

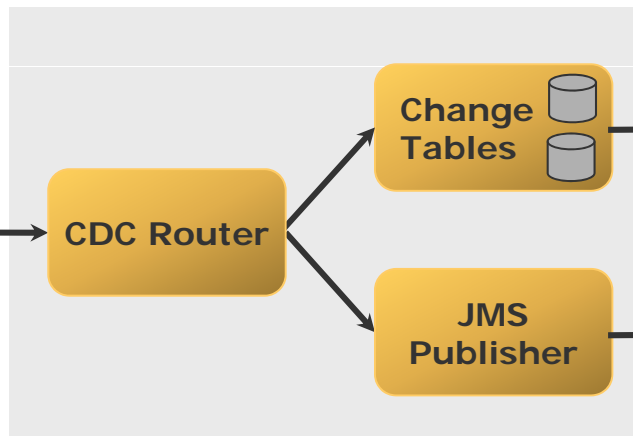

# Attunity Stream for RMS

## Log-based CDC for RMS files

OpenVMS (Alpha/Itanium)

Windows, UNIX

# RMS – CDC - Key Capabilities

- ❖ Log-based CDC
- ❖ Filter Changes (by file, operation, ...)
- ❖ Flexible Change Delivery (periodic, continuous)
- ❖ Interfaces to ETL and EAI Tools
- ❖ Reliable Delivery and Recovery
- ❖ Easy to Use

# CDC for RMS

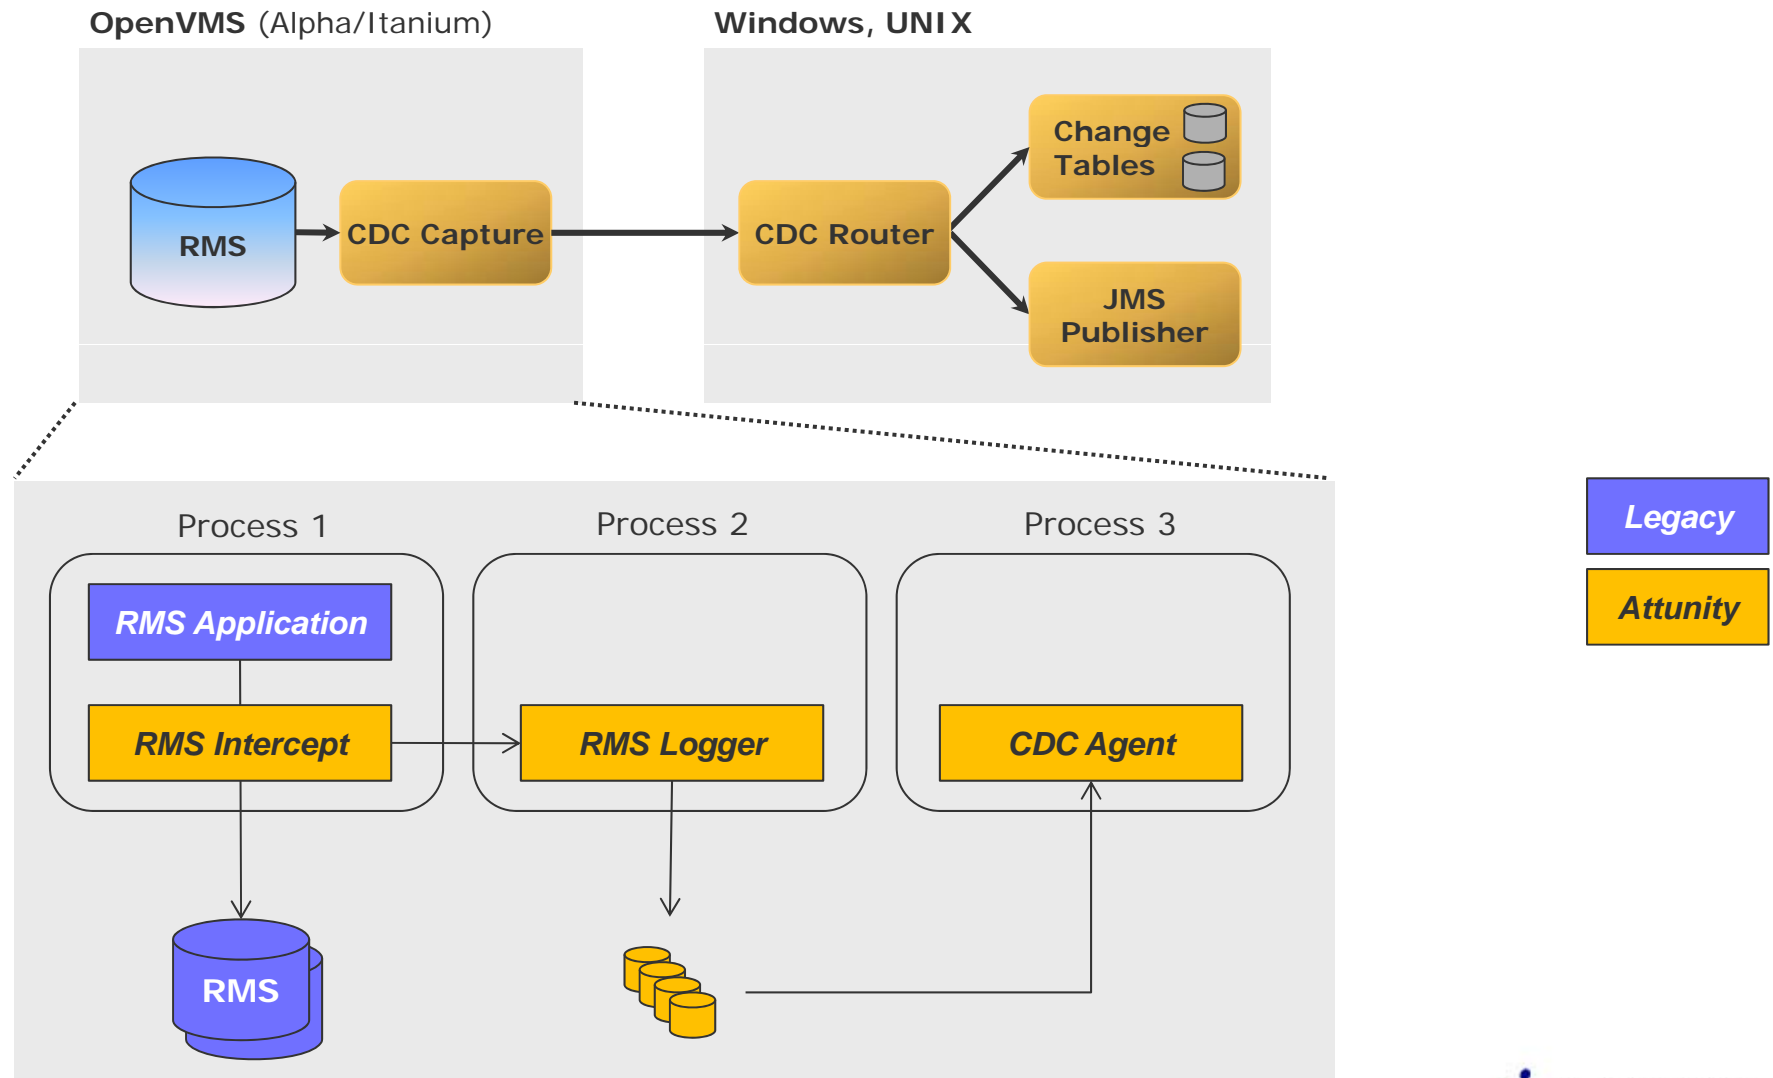

## ❖ **Unique service intercepts \$RMS system services**

- ❖ Provides system wide capture of RMS changes
  - ❖ Cobol, Basic, Datatrieve, DCL, Utilities... Any and all RMS record operation.
- ❖ Record based (log : header + record data )
  - ❖ Header : Sequence#; Timestamp; FileID; ProcessID; RFA; Operation; Size.
- ❖ No changes required to any RMS programs
- ❖ Supports all RMS file types
- ❖ Support OpenVMS clusters
- ❖ Independent of RMS (AI/BI) Journaling. RU-J not supported.
- ❖ High performance, low impact
  - ❖ Per node Logger not noticeable (3%?)
  - ❖ Shared Agent example usage: 1/4 CPU for 10 Million changes in 3 GB Logs.

## ❖ **Easy Configuration**

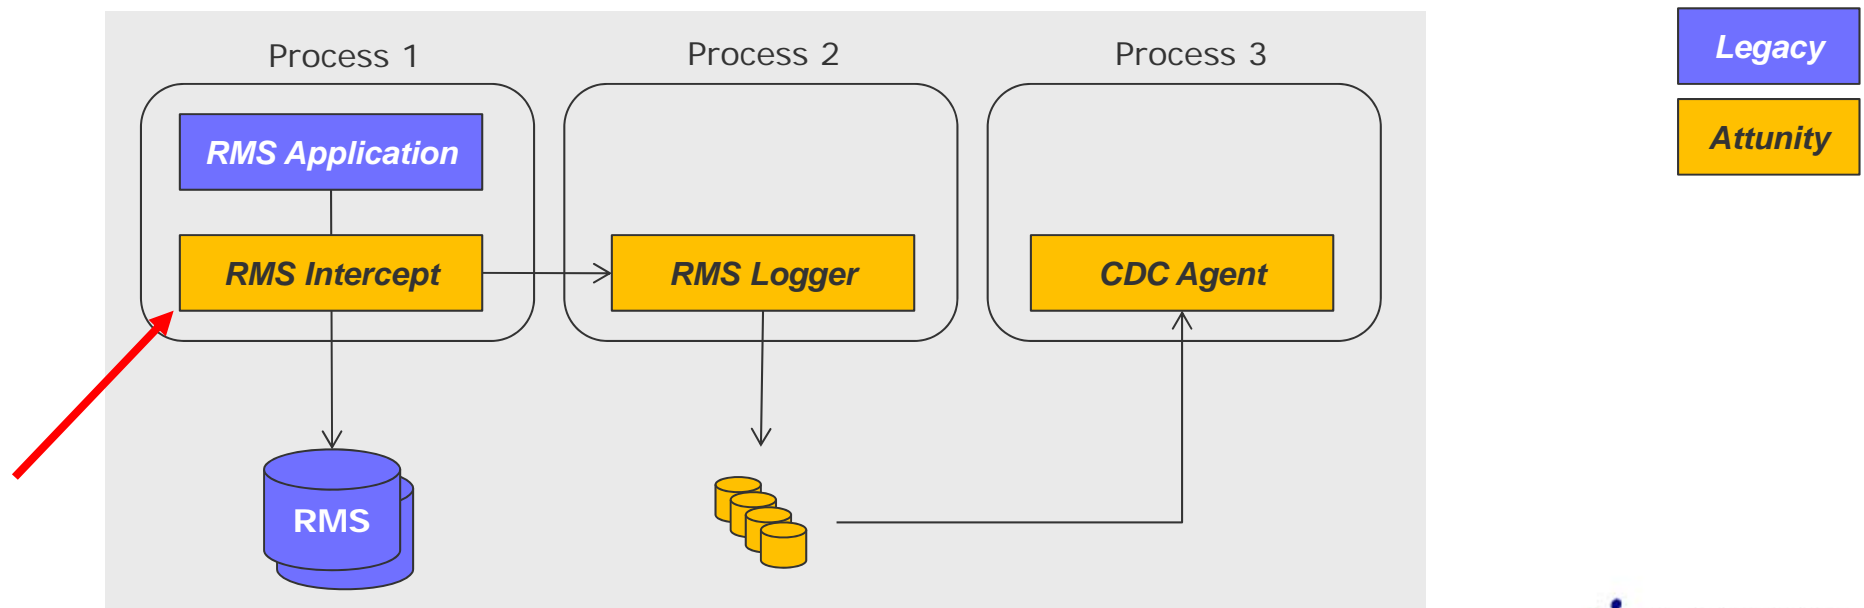

- ❖ GUI-based with wizards in the Attunity Studio
- ❖ Metadata import available from many sources

# RMS CDC Architecture - Overview

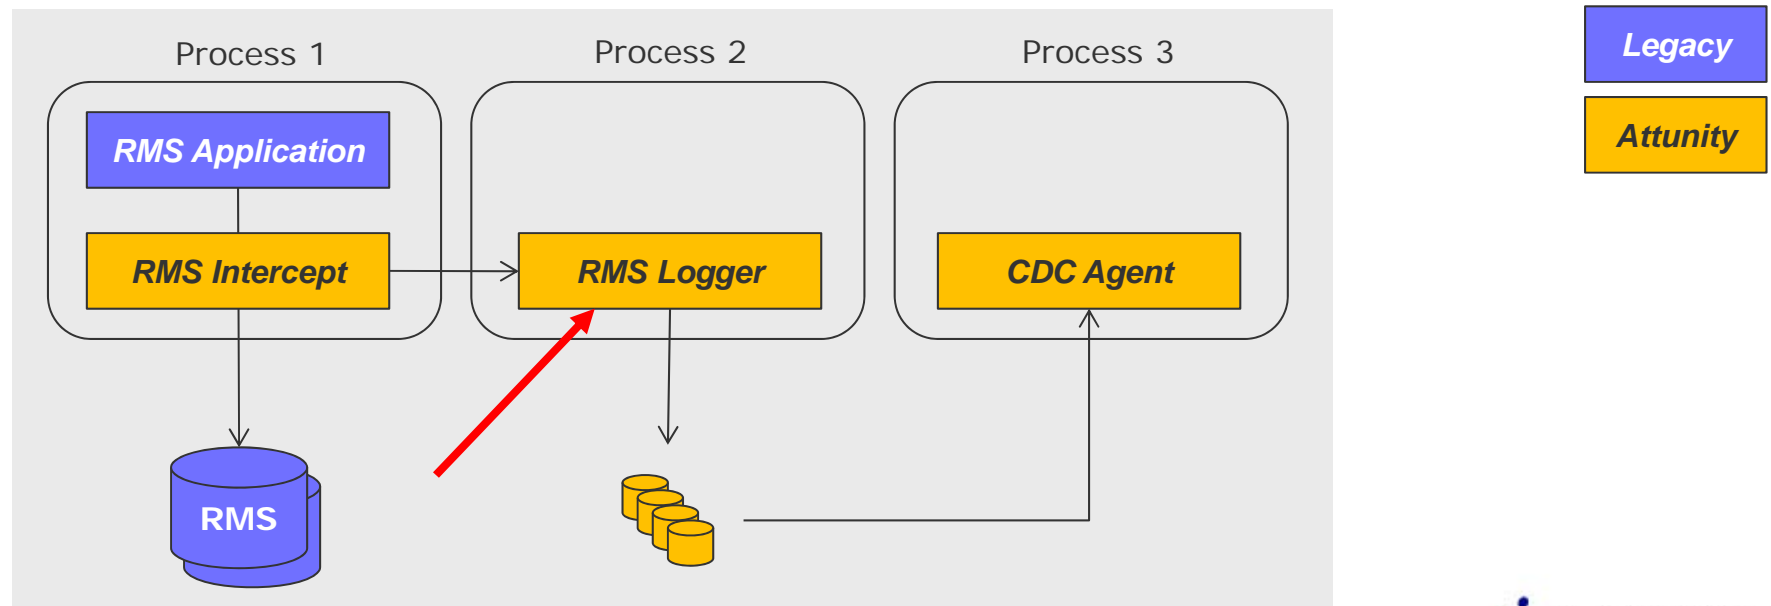

# RMS CDC Architecture – RMS Intercept

- ❖ **RMS Intercept** – forms an envelope around the \$RMS system service. Captures changes only for specified list of files. By file-id (from filename) or by name (“next version”)

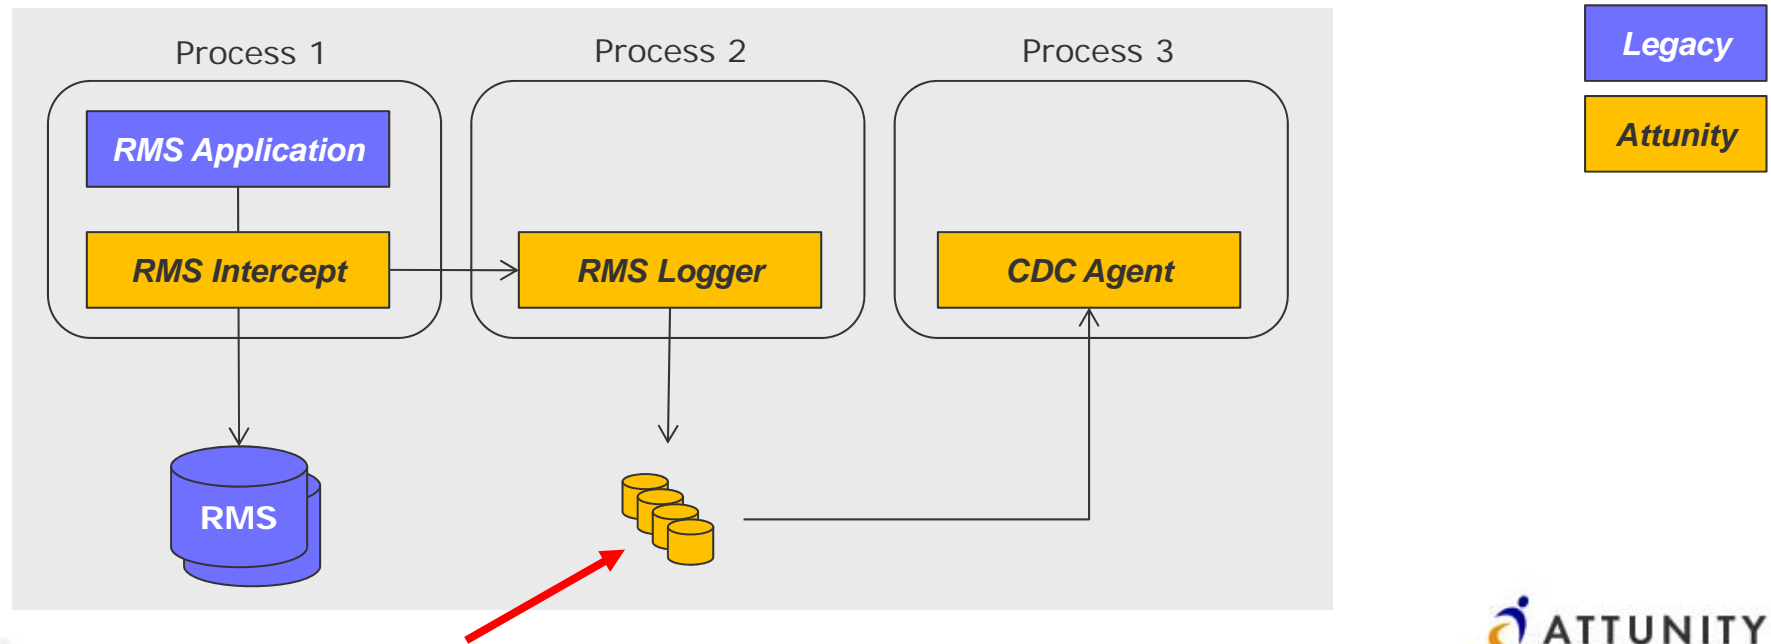

# RMS CDC Architecture – RMS Logger

- ❖ **RMS Logger** – a separate process (1 per node) which reads the intercepted changes from the intercept and writes them to the transient storage

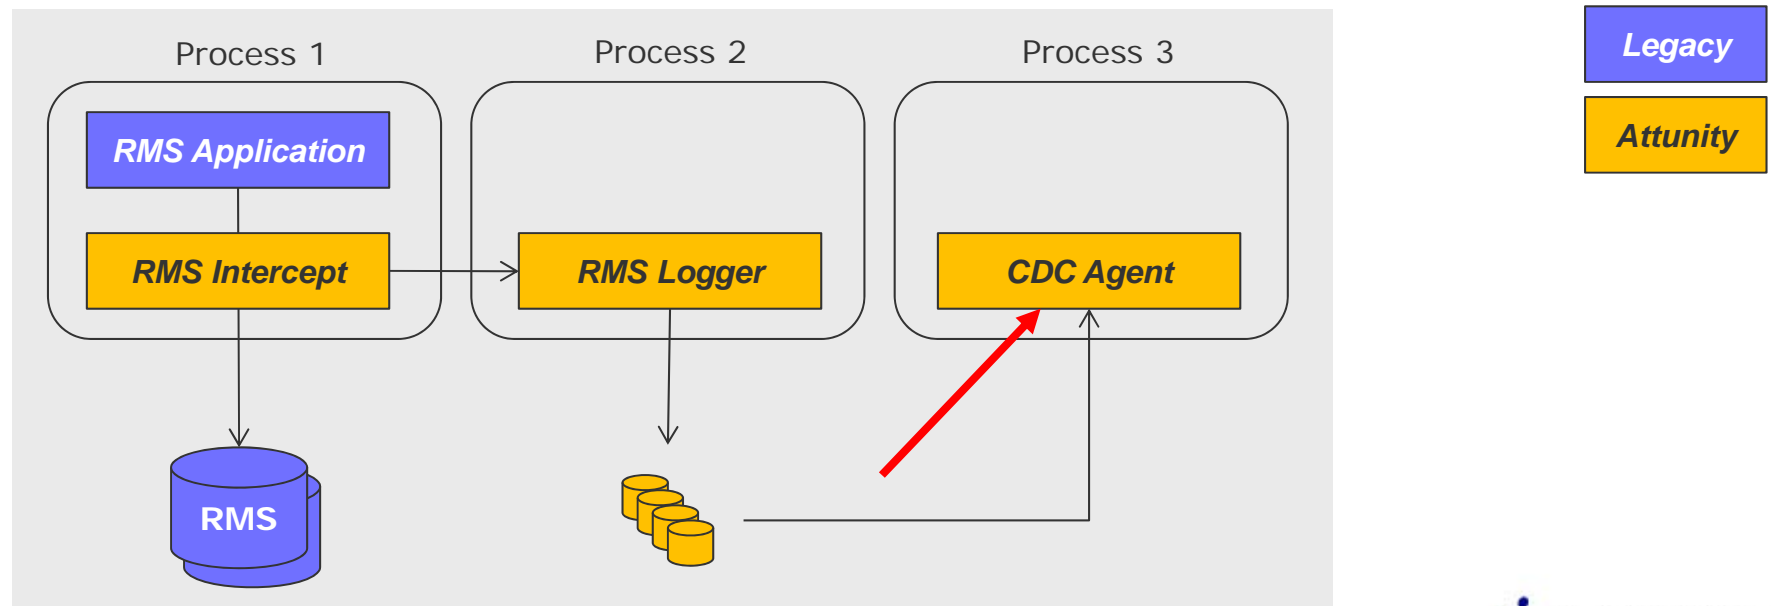

# RMS CDC Architecture – Transient Storage

- ❖ **Transient Storage** – a sequence of typically-fixed size-sequential files holding the captured changes. When one fills up, a new one is created. (ALQ, DEQ, Max.). Utility to control attributes and force new logs if so desired (Daily?)

# RMS CDC Architecture – CDC Agent

- ❖ Attunity **RMS CDC Agent** – Async to the capture process, it reads changes from the transient storage and propagates them to the change processor off platform. Single active agent per 'solution' (router on linux/windows). Failover as needed.

# Agenda

- ❖ Offloading Data for BI – Enabling Technologies
- ❖ RMS CDC – Attunity Stream for RMS
- ❖ **RMS Data Replication – Attunity RMS-CDC for SSIS**
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# Attunity RMS-CDC for SSIS

## ❖ Complete solution for data replication

- ❖ Initial Load + Incremental Load
- ❖ Supports any target (e.g. Oracle/Rdb, SQL Server,...)
- ❖ Monitoring and Control

## ❖ Leverage CDC for incremental load

- ❖ Log-based RMS CDC
- ❖ Synchronized with Initial Load
- ❖ Granular scheduling

## ❖ Easy to Use

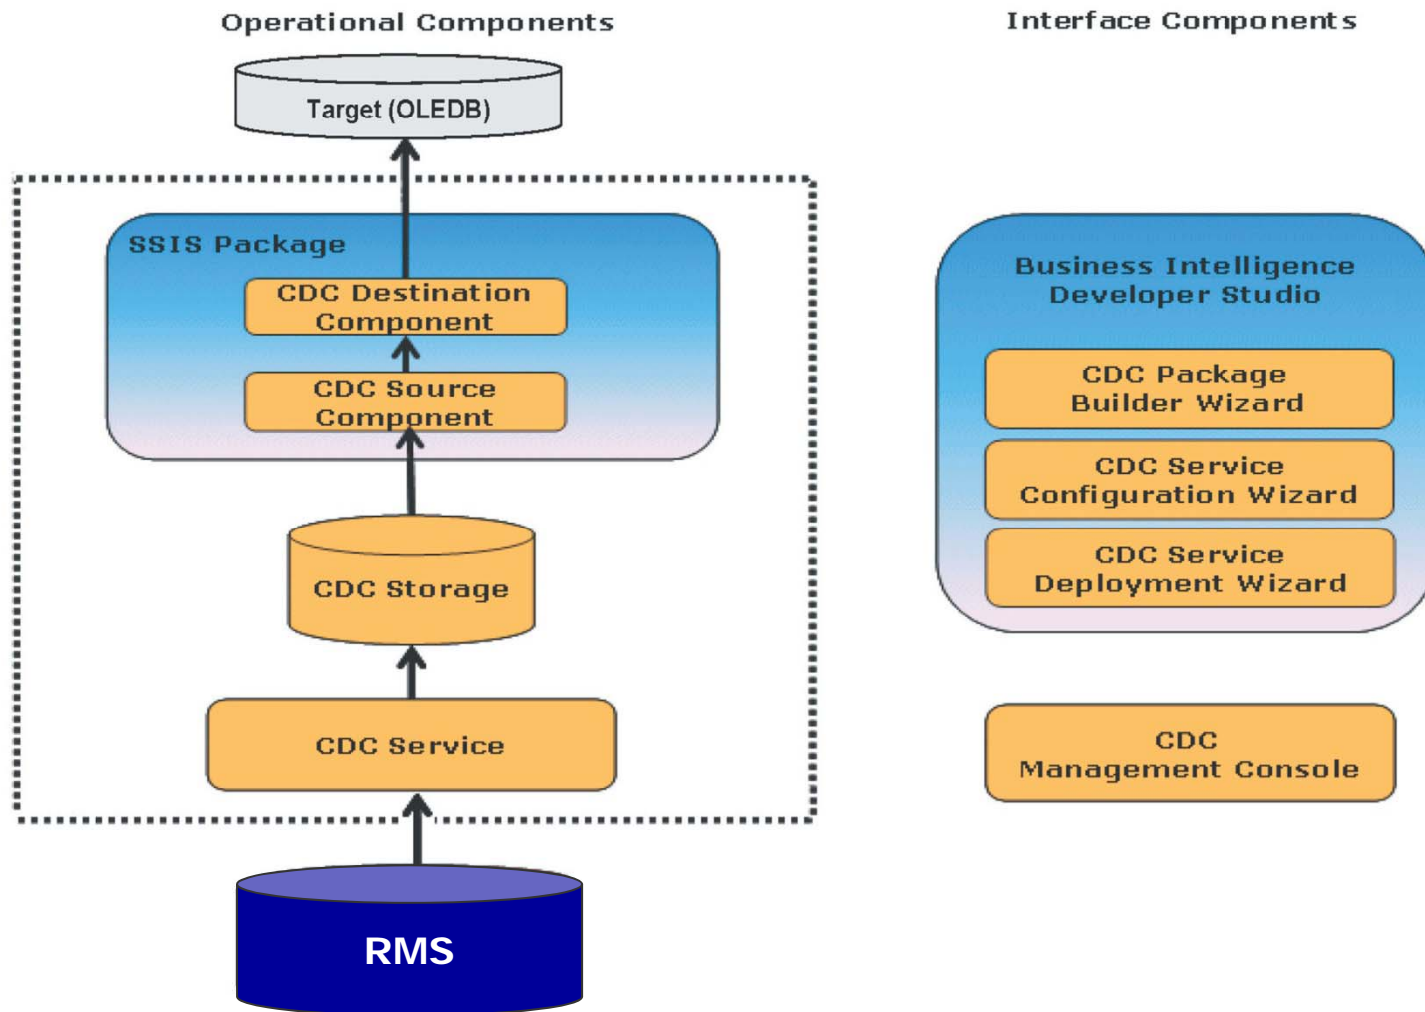

- ❖ Design-time with wizards in BIDS/Visual Studio
- ❖ Automatic generation of metadata and packages
- ❖ Runtime uses standard SSIS packages

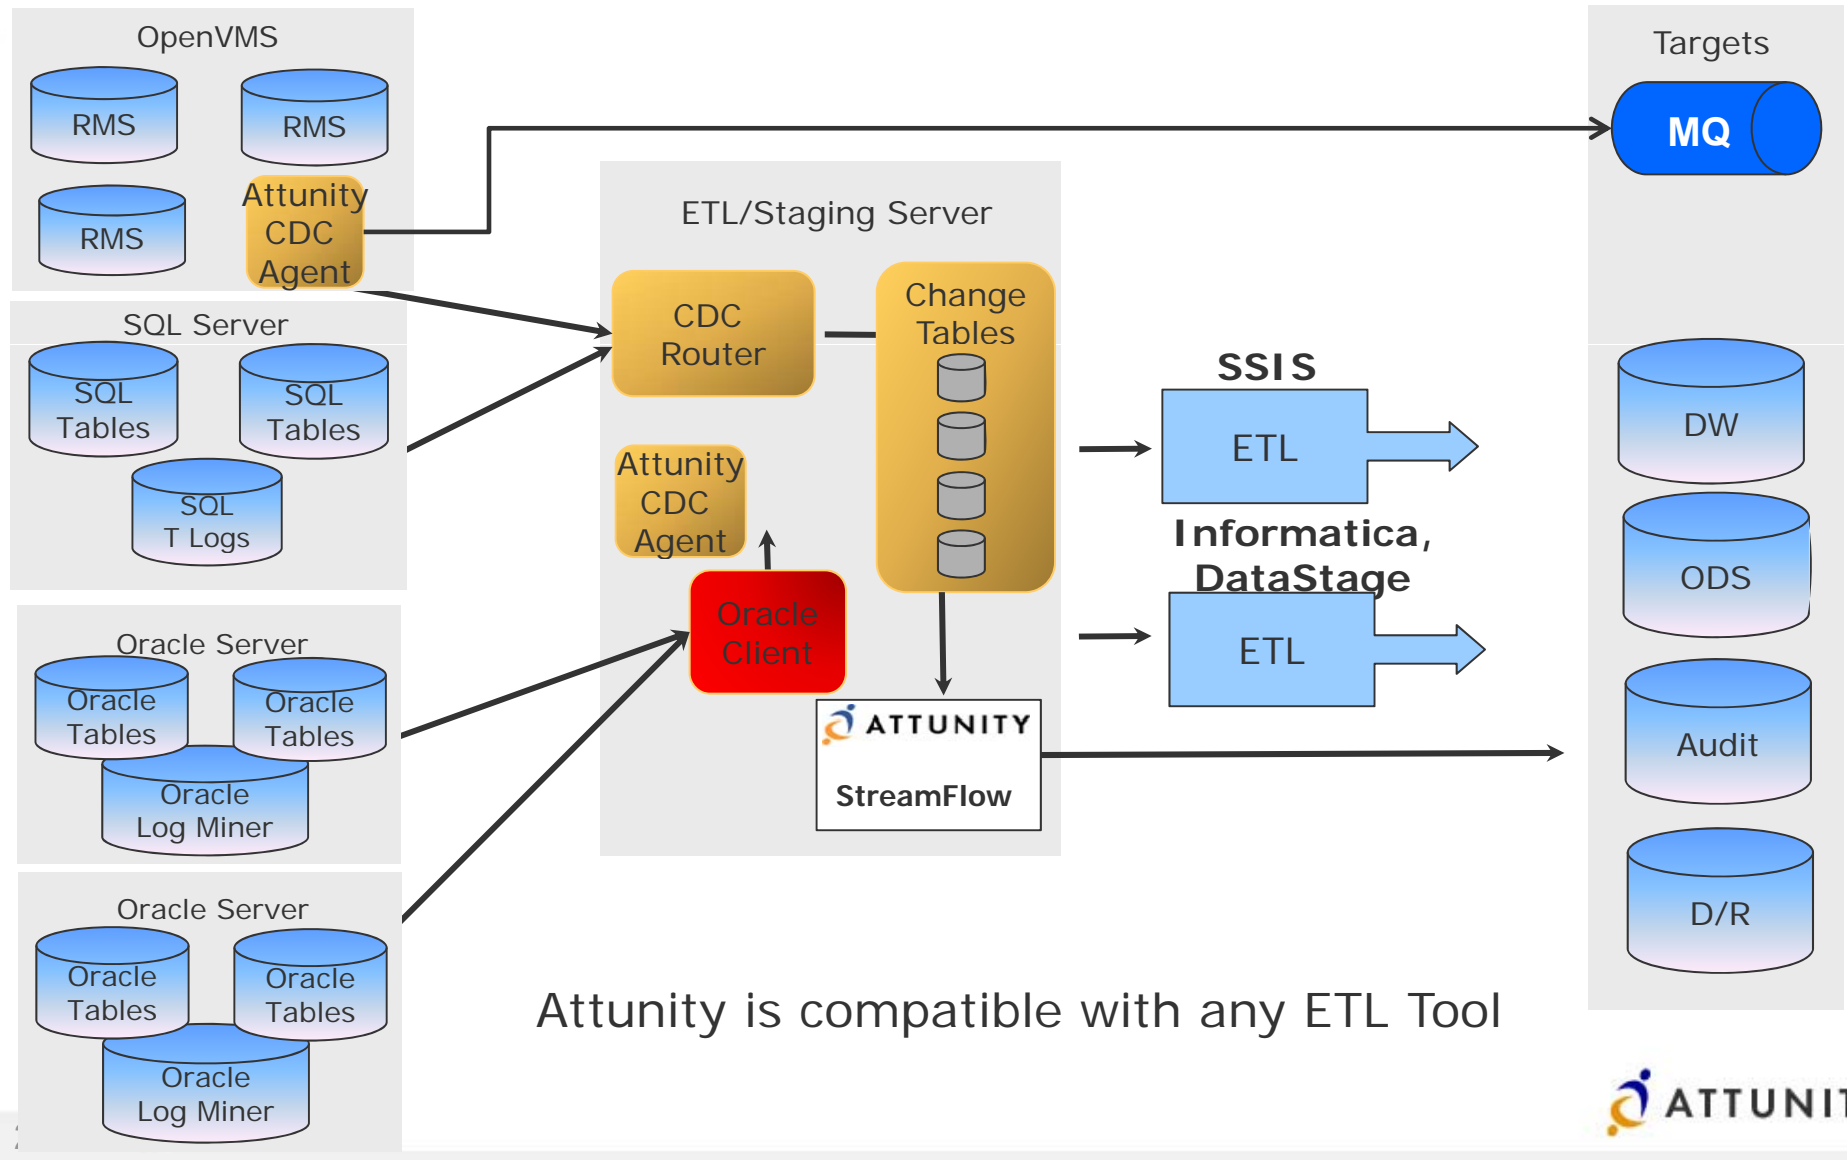

# Attunity RMS-CDC for SSIS

## Product Components

# Attunity Stream for Multiple Consumers

# Agenda

- ❖ Introduction
- ❖ Connect
- ❖ RMS CDC – Attunity Stream for RMS
- ❖ RMS Data Replication – Attunity RMS-CDC for SSIS
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# Agenda

- ❖ Offloading Data for BI – Enabling Technologies
- ❖ RMS CDC – Attunity Stream for RMS
- ❖ RMS Data Replication – Attunity RMS-CDC for SSIS
- ❖ Demo - end to end!
- ❖ Summary + Q&A

# Summary

- ❖ **Offload RMS data for reporting and BI**
- ❖ **Simplify data migration and modernization projects**
- ❖ **Synchronize RMS with other data sources**
- ❖ **Extract RMS data efficiently and in real-time**
- ❖ **Eliminate batch windows required to move RMS data**

# Summary – About Attunity

## Corporate

- **Real-time data integration & event capture**
- +15 years of expertise in data/legacy integration
- Worldwide operations with offices in US, Europe and Asia

## Products

- **CDC and Operational Data Replication**
- Data Connectivity and Federation
- Legacy Adapters and Web Services

## Customers

- **+400 direct customers worldwide**
- Technology of choice for HP, Microsoft, Oracle, IBM, ...
- Thousands via OEM partners

# Next Steps...

1. Ask questions
2. Get started today with an evaluation
3. Check our introductory pricing for existing customers

**Thank You!**
